FOR SAFE OFFICES

ENGINEERS OF LIGHT

YARA + LTX

At customer request

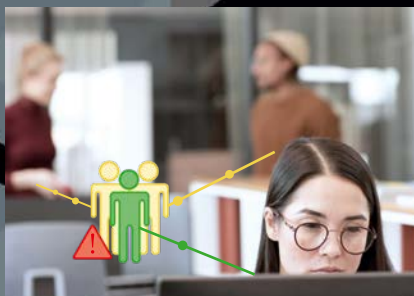

OFFICE OCCUPANCY ALERT FOR EMPLOYEES

If the office is close to the maximum booking limit, the employees who have not yet booked will be informed and the use of the home office will be suggested.

NOT BOOKABLE DESKS

If required, not only can occupancy values be set but certain desks can also be removed from the booking system. This ensures a safe distance at the workplace.

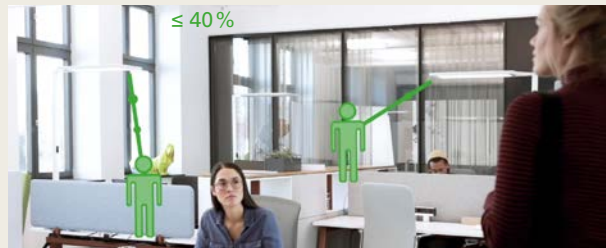

At customer request

SEPARATED WORKING GROUPS

Divide your workforce into several groups. LTX ensures that only employees of one group can enter the office. This reduces the probability of infection even more.

LIMIT OFFICE WORKLOAD

Your employees book a workplace in one area for their day in the office. LTX ensures that only e.g. 40% of the workstations can be occupied.

ENTRY CONTROL

Using the porter function, the admission control can check whether the employee has booked a seat.

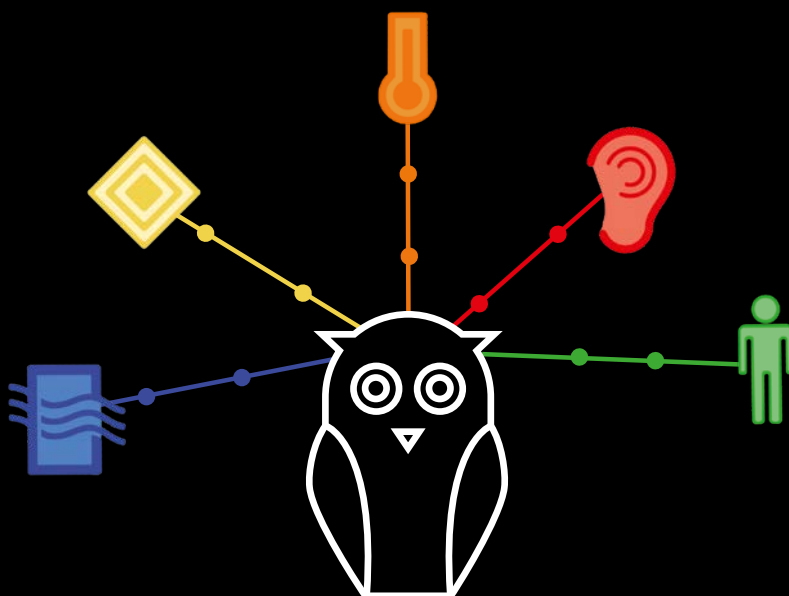

AIR QUALITY

Minute-by-minute measurement of air quality allows you to take targeted measures to create improved air quality and, if necessary, potential viral load in the air. The icons of our LTX sensor technology allow the employee to easily identify the air quality themselves and open the window, for example.
